SCOPE

DISEASE/CONDITION(S)

Seborrhoeic dermatitis

GUIDELINE CATEGORY

Diagnosis
Management
Treatment

CLINICAL SPECIALTY

Dermatology
Family Practice
Internal Medicine

INTENDED USERS

Health Care Providers
Physicians

GUIDELINE OBJECTIVE(S)

Evidence-Based Medicine Guidelines collects, summarizes, and updates the core clinical knowledge essential in general practice. The guidelines also describe the scientific evidence underlying the given recommendations.

TARGET POPULATION

Patients with or suspected to have seborrhoeic dermatitis

INTERVENTIONS AND PRACTICES CONSIDERED

Diagnosis

Assessment of clinical features

Treatment/Management

1. Measures to remove the thick scales and decrease the amount of sebum (use of cream containing salicylic acid and sulphur [but not Vaseline] or by wetting and washing; increased washing of seborrhoeic skin)
2. Measures to decrease fungal growth (washing the scalp with ketoconazole shampoo, topical treatment with emulsions containing imidazole derivatives, antimycotic on skin creases, ultraviolet light therapy)
3. Symptomatic topical treatment, including corticosteroid liniments for the scalp or creams for other parts of the body; moisturizing emollients after washing; combination of ketoconazole shampoo and corticosteroid liniments

MAJOR OUTCOMES CONSIDERED

- Signs and symptoms of seborrhoeic dermatitis
- Relapse rates after treatment

METHODOLOGY

METHODS USED TO COLLECT/SELECT EVIDENCE

Hand-searches of Published Literature (Primary Sources)
Hand-searches of Published Literature (Secondary Sources)
Searches of Electronic Databases

DESCRIPTION OF METHODS USED TO COLLECT/SELECT THE EVIDENCE

The evidence reviewed was collected from the Cochrane database of systematic reviews and the Database of Abstracts of Reviews of Effectiveness (DARE). In addition, the Cochrane Library and medical journals were searched specifically for original publications.

NUMBER OF SOURCE DOCUMENTS

Not stated

METHODS USED TO ASSESS THE QUALITY AND STRENGTH OF THE EVIDENCE

Weighting According to a Rating Scheme (Scheme Given)

RATING SCHEME FOR THE STRENGTH OF THE EVIDENCE

Levels of Evidence

A: Strong research-based evidence. Several relevant, high-quality scientific studies with homogeneous results.

B: Moderate research-based evidence. At least one relevant, high-quality study or multiple adequate studies.

C: Limited research-based evidence. At least one adequate scientific study.

D: No scientific evidence. Expert panel evaluation of other information.

METHODS USED TO ANALYZE THE EVIDENCE

Systematic Review

DESCRIPTION OF THE METHODS USED TO ANALYZE THE EVIDENCE

Not stated

METHODS USED TO FORMULATE THE RECOMMENDATIONS

Not stated

RATING SCHEME FOR THE STRENGTH OF THE RECOMMENDATIONS

Not applicable

COST ANALYSIS

A formal cost analysis was not performed and published cost analyses were not reviewed.

METHOD OF GUIDELINE VALIDATION

Peer Review

DESCRIPTION OF METHOD OF GUIDELINE VALIDATION

Not stated

RECOMMENDATIONS

MAJOR RECOMMENDATIONS

The levels of evidence [A-D] supporting the recommendations are defined at the end of the "Major Recommendations" field.

Epidemiology

- Usually occurs in adults (aged 18-40 years) in areas rich in sebaceous glands
- Men are more commonly affected than women.

Symptoms and Signs

Sites of Predilection

- Affected skin areas in order of frequency
 - Scalp
 - Face; eyebrows, nasolabial creases, sideboard (sideburn) areas
 - Ears and ear canals
 - Mid-upper parts of the chest and back ("perspiration creases")
 - Buttock crease, inguinal area, genitals, and armpits
 - Only rarely becomes generalized

Clinical Picture

- Greasy or dry scaling of the scalp, sometimes a "cradle cap"
- Mildly scaling eczematous patches on the face at typical locations, often with itch and stinging
- Itch and inflammation of the ear canal
- Blepharitis
- Well-demarcated eczematous patches on mid-upper trunk.
- Intertrigo

Aetiology and Pathophysiology

- Increased layer of sebum on the skin, quality of the sebum, and the immunological response of the patient favour the growth of *Pityrosporum* yeast.
- Degradation of the sebum irritates the skin and causes eczema.

Diagnosis

- Based on the typical clinical presentation and location of the eczema
- In psoriasis (Peter & Richarz-Barthauer, 1995) the scales are thicker and the sites of predilection are different (elbows, knees). Psoriasis often has a familial occurrence.

Treatment

- The treatment does not cure the disease permanently. Therefore it must be repeated when the symptoms recur, or even prophylactically (Peter & Richarz-Barthauer, 1995) [B].

Removing the Thick Scales and Decreasing the Amount of Sebum

- The scales can be softened with a cream containing salicylic acid and sulphur (but not Vaseline) or by wetting and washing.
- Seborrhoeic skin should be washed more often than usual.

Decreasing Fungal Growth

- Washing the scalp with ketoconazole shampoo (Peter & Richarz-Barthauer, 1995) [B]
- Topical treatment with creams containing imidazole derivatives
- Antimycotic on skin creases (rarely necessary)
- Sometimes ultraviolet light therapy

Symptomatic Topical Treatment

- Corticosteroid liniments for the scalp (class I - III, from mild to potent) (Hersle, Mobacken, & Nordin, 1996) [B]
- Corticosteroid creams for other parts of the body (class I - III, from mild to potent)
- Moisturizing emollients after washing
- Ketoconazole shampoo and corticosteroid liniments must often be combined in therapy-resistant cases.

Definitions:

Levels of Evidence

A: Strong research-based evidence. Several relevant, high-quality scientific studies with homogeneous results.

B: Moderate research-based evidence. At least one relevant, high-quality study or multiple adequate studies.

C: Limited research-based evidence. At least one adequate scientific study.

D: No scientific evidence. Expert panel evaluation of other information.

CLINICAL ALGORITHM(S)

None provided

EVIDENCE SUPPORTING THE RECOMMENDATIONS

REFERENCES SUPPORTING THE RECOMMENDATIONS

[References open in a new window](#)

TYPE OF EVIDENCE SUPPORTING THE RECOMMENDATIONS

Concise summaries of scientific evidence attached to the individual guidelines are the unique feature of the Evidence-Based Medicine Guidelines. The evidence summaries allow the clinician to judge how well-founded the treatment recommendations are. The type of supporting evidence is identified and graded for select recommendations (see the "Major Recommendations" field).

BENEFITS/HARMS OF IMPLEMENTING THE GUIDELINE RECOMMENDATIONS

POTENTIAL BENEFITS

Appropriate differential diagnosis, management, and treatment of seborrhoeic dermatitis

POTENTIAL HARMS

Not stated

IMPLEMENTATION OF THE GUIDELINE

DESCRIPTION OF IMPLEMENTATION STRATEGY

An implementation strategy was not provided.
